Modernise and Future–Proof your Data Centre with VMware appliances powered by Dell EMC

01. Modernise
Datacentre Transformation

Accelerate infrastructure modernisation with VMware appliances powered by Dell EMC to make IT a strategic, cost–effective advantage for your company. By powering the leading Hyper–Converged Infrastructure (HCI) solutions, VMware appliances help organisations evolve their data centre without risk, control IT costs and scale to address tomorrow's business needs.

03. Automate
Accelerating the Delivery of Services

Businesses need to increase agility to respond to a constantly evolving marketplace. They need a cloud operating model—provisioning IT resources to projects on demand which requires simplified operations from automation. Automation accelerates the delivery of IT services for a faster time to market. Automation and orchestration also drives standardisation of IT processes.

02. Transform
to the Hybrid Cloud

Organisations can confidently accelerate their evolution to a modern datacentre by choosing the right deployment option for their needs. IT leaders can deploy HCI powered by VMware in private cloud, edge computing or on demand in the public cloud with thousands of cloud partners, including Amazon with VMware Cloud™ for AWS—all at a fraction of the cost of traditional, purpose built storage or less efficient HCI solutions.

CDW PEOPLE WHO GET IT®

5 Reasons to choose VMware powered appliances by Dell EMC

The adoption of hyper-converged infrastructure is growing rapidly as companies race to meet the expectations of today's digital economy. Explore 5 benefits of VMWare powered appliances by Dell EMC.

Reduce Data Centre Footprint

Adding numerous servers and storage units to support rapid expansion can lead to data centre sprawl. Move to a hyper-converged solution to bring together the disparate infrastructure elements that power IT applications for an environmentally friendly option that takes up much less space.

Simplify System Management

As your infrastructure grows, any cost savings you gain from commoditised hardware is quickly overshadowed by the complexity of managing and supporting disparate systems. Go hyper-converged and centralise operations management from a single pane of glass for faster, simpler IT.

Automate Operations

Streamline operations through automation with a hyper-converged infrastructure that is self-contained, fully integrated and provided by one vendor. Start automating time-consuming tasks and processes so you can free up your IT staff to focus on driving innovation and improving time-to-market for new services.

Support Rapid Provisioning

Move to hyper-converged IT and rapidly provision new systems and virtual machines at the speed today's digitally-driven customers demand. The larger your organisation, the more relevant rapid provisioning becomes so you can continuously meet expectations while staying within your IT budget.

Improve Data Protection

Enhance data protection with the centralised nature of hyper-converged infrastructure that offers built-in security and data handling policies. Respond to issues quickly using a centralised console with data protection, backup and recovery integrated into the infrastructure.

About CDW

To meet the needs of today and tomorrow, organisations must evolve. Driving business results and adding value to end customers requires industries to navigate an ever-changing information technology landscape. At CDW, we bring the best technology and industry knowhow in the world together to help you solve complex challenges, simply.

Tailoring technologies to your organisational requirements is vital to ensuring successful deployment and long-term viability. At CDW, our Business and Solution Architects use industry-leading technologies from Dell EMC and VMware to design and deliver a IT strategy, which reflects the needs of your business. Building IT solutions that generate results is what we do. And we do it better than anyone else because we are the People Who Get IT.

AT A GLANCE

Seamless Evolution - Extend virtualisation to storage with a secure, integrated hyper-converged solution that simply works with your VMware environment:
· Native to your hypervisor and leading public clouds
· Use existing tools for compute and storage
· Protect and optimise current investments

Flexibility – Deploy software defined infrastructure across your data centre with the industry's largest HCI ecosystem:
· Extend to full stack HCI and Digital Foundation
· Use certified solutions with your preferred vendor
· Unify resources under policy-based management

Cloud Ubiquity – Evolve to a Digital Foundation, a common control plane from edge to core to cloud—built on HCI:
· Consistent operations from edge to core to cloud
· Intrinsic security for data-at-rest and in-flight
· Hundreds of public cloud providers

For more information or to discuss your requirements, email info@uk.cdw.com or contact your CDW Account Manager.
